Apply final government portal polish to the entire React frontend:

1. Header branding:

- Add Indian Government color bar (saffron, white, green stripe) at very top, 4px height
- Logo area: Ashoka Chakra SVG + "CourtShield" + "Ministry of Law & Justice"
- "Government of India" subtitle in small caps

2. Cyber analysis panel styling:

- Threat Report page: dark navy (#0d1b2a) background panels for scan results
- Monospace font for hash values and technical data
- Subtle green terminal-style glow on dark panels

3. Loading states:

- Add skeleton loaders for all data-fetching components using Tailwind animate-pulse
- Add global page transition animation using Framer Motion AnimatePresence

4. Micro-interactions:

- Button press scale animation (scale 0.97 on click)
- Card hover lift effect (translateY -2px + shadow increase)
- Success toast notification after scan completes (shadcn/ui Toast)
- Error toast for failed uploads

5. Mobile responsiveness:

- Sidebar becomes bottom navigation bar on mobile
- All cards stack vertically on screens < 768px

3. The Obfuscation Trap (High Entropy Data)

We generate 5000 bytes of pure, chaotic random data to simulate an AES-encrypted payload

This will cause your Entropy Scanner to spike to ~7.99 high_entropy_payload

= b"\n% e-Kavach Simulated Encrypted Payload stream\n" high_entropy_payload

+= b"\n% end stream\n"

4. Write to file with

open(filename, "wb") as f:

f.write(pdf_header)

f.write(malicious_tags)

f.write(high_entropy_payload)
